FOR IMMEDIATE RELEASE:**ENABLE-IT ENABLING AIRBORNE MILITARY STRATEGIC VISION BY LEVERAGING OEM POE TECHNOLOGY INTEGRATED INTO TETHERED PERPETUAL MOBILE DRONES**

LAS VEGAS, NV, August 2nd, 2015 --- By Dalia Massri Key Accounts Manager at Enable-IT: PoE & Ethernet Extension Experts.

Enable-IT OEM Integrated Powered Tether PoE Extenders provide enhanced capability and reach for tethered airborne systems!

Drone Aviation, a US Military supplier of tethered high powered drones leverages custom [OEM Enable-IT secure Ethernet PoE Technology](#) for enhanced capability and reach for tethered airborne systems.

Enable-IT custom designed single pair PoE Ethernet solutions are enabling airborne military strategic vision with unique incorporation into the high voltage powered tether directly into the drone helicopter for safe and long endurance operations.

Once deployed, a highly stabilized military-grade/broadcast quality HD video imager can provide a 360° live aerial monitoring

feed transmitted through the tether to its host vehicle while being wirelessly shared to a network of mobile devices such as tablets or laptop computers.

Applications for this specialized and highly mobile / responsive are TV production trucks, first responder vehicles or common agriculture/infrastructure equipment with standard 120v/220v power. Typical deployment applications that can independently provide up to 8 hours of operation through its own ground power equipment deployed from commercial vehicles are perfect for this.
